

# EPSI

## Easy-Passive-Security-Interface

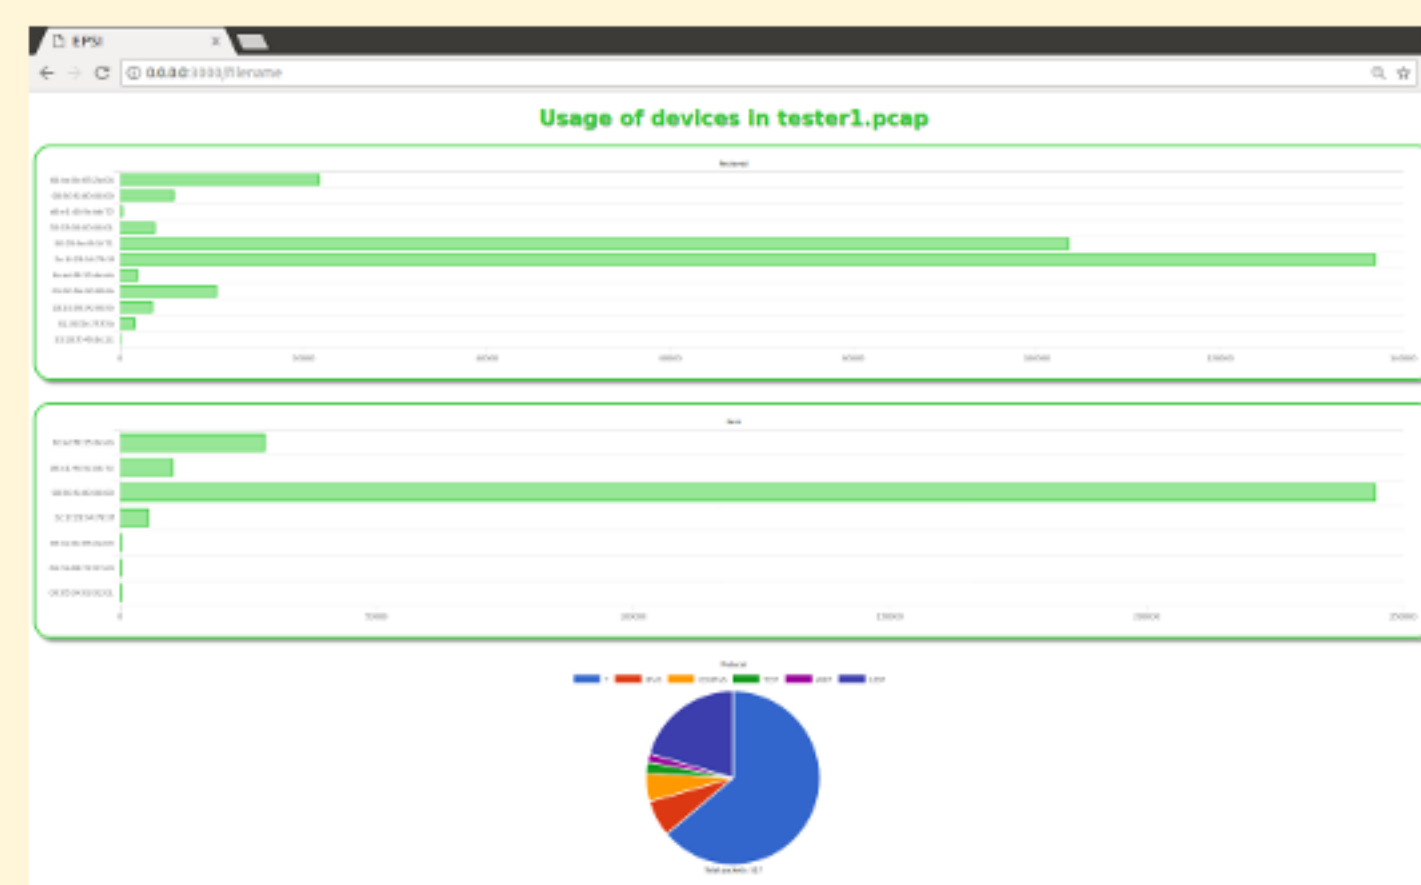

The Easy-Passive-Security-Interface is a web application that can be used to identify devices connected to your local network and display their network usage. You can also convert your favorite password into a stronger, more secure, passphrase using EPSI

### Identify connected devices

Scan your local subnets  
Display IP & MAC addresses  
Identify a device by manufacturer

### Display their network usage

Create a .pcap file using **WIRESHARK**  
Upload the .pcap to EPSI  
Display the summary of usages

### Improve your passwords

Perfect your password  
Enter your old password (password) [password]  
If uppercase If lowercase If digits If special char If length  
New password  
CallPassword87  
Not satisfied? Try again

Enter a potential password  
Select the necessary constraints  
Generate an improved passphrase
